PROJECT DESCRIPTION
Governors Island is a 172 acre island in the heart of New York Harbor. The Island was a former military base from the early 1800s until 1996. In 1966, the Army turned over control to the Coast Guard, who occupied the Island until its departure in 1996. In 2003, the federal government sold 150 acres of Island to the people of New York, with the Island’s governance and funding
jointly shared by the City of New York and State of New York. The remaining 22 acres of the Island was declared the Governors Island National Monument that is overseen by the National Park Service. The City of New York is currently responsible for Governors Island, and created the Trust for Governors Island (TGI), the organization charged with the operations, planning and redevelopment of 150 acres of the Island. TGI competitively procured and awarded Turner Construction Company to provide facilities and construction management services on Governors Island. Turner Construction is responsible for maintaining Contracts, as well as construction and facilities oversight on the Island.

Building 110 is currently a tenant-occupied space, heated with steam boilers located in the adjacent Building 111. Turner Construction, on behalf of TGI, is seeking a Subcontractor to install two (2) new gas-fired steam boilers, integrate and modify the existing heating system to conform to the boiler installation, and architecturally and mechanically fit-out of the proposed mechanical room to comply with building codes. The objective of this project is to provide Building 110 with its own stand-alone heating system independent of the adjacent Building 111, as the two buildings will be occupied by different tenants.

**SCOPE OF WORK**
For a complete description of the scope work please see Exhibit A Scope of Work.
